OPTICLAR FLEXI 10 EXAMINATION LIGHT

NEW!

OPTICLAR FLEXI 10 LIGHT

The innovative examination light with non-contact infra red on/off and dual power operation.

- A non-contact infra red sensor provides non-contact on/off switching avoiding any risk of contamination.
- The lower section of the high-quality shaft rotates around 270°. The flexible upper part with a reach of 125 cm lets you adjust the light into the ideal position where it then stays put.
- Brightness and focussing can be adjusted directly at the thermally-insulated light head, which remains cool to the touch.
- The light incorporates a dual-function power supply with both mains and rechargeable Lithium modes. The Lithium battery recharges in 6 hours to give 8 hours operation at maximum brightness.

FLEXI 10 EXAMINATION LIGHT

with wheeled stand	520.020.054 MR
with universal clamp	520.020.052 MR
with wall-mounting bracket	520.020.050 MR

Specification

10W high-power TrueTone LED

Max. flexible arm reach: 125 cm

Mounting options: Wall, clamp or wheeled stand

Focussing head: At 30 cm: 3 to 15 cm diameter
At 50 cm: 4 to 22 cm diameter
