

Cell Sweep®

The MedGyn Cell Sweep is an all-in-one pap smear device that eliminates the need for a cytobrush and spatula. Cell Sweep completely embraces and covers the T-zone/SCJ during cell sampling.

Features & Benefits

- Cell Sweep allows for optimal cell harvest and cell transferring to achieve an effective pap smear
- Dual sampling of Endo and Ectocervix
- Thin layer preparation of slide using liquid base transfer medium
- Separation of endocervical and ectocervical cells in a one slide technique
- Specific design ensures achieving a consistent monolayered spread
- Minimizes false negatives as it completely covers the T-zone/SCJ
- Sexually transmitted disease sampling
- Minimizes red blood cell and blood artifact

Simplicity

Cell Sweep is a single device with the capacity for simultaneous endocervical and ectocervical sampling. This is normally achieved using a brush and a spatula separately. It is soft, malleable, and adaptable to individual cervical variations. It samples the entire T-zone while remaining in close contact with the cervix.

The design and specific structure of Cell Sweep enables the cervix to be sampled twice, simultaneously, in a 360° motion. While the bristles are harvesting endocervical cells, both the spatula section and four lower, longer bristles are harvesting ectocervical cells.
